

IRbis.Snapshot Solution

IRbis.Snapshot Solutions Overview

IRbis.Snapshot is a "Real Time" Financial Summarization Tool. It calculates Cash Forecast, AR Age, Sales Projections, Return on Investment, and more.

IRbis.Snapshot's first tab starts with your current cash on hand, adds your projected receipts, deducts your projected disbursements, and projects your 30 Day Cash Balance. Notice the Green "UP" trend indicator. IRbis.Snapshot uses Microsoft Dynamics NAV's real time functionality to present information to the viewer that is always accurate. The formulas can also be adapted to company specific requirements, but most of the common business metrics (KPIs) are included.

Doing cash flow projections can take hours and as soon as it is done things change. The IRbis.Snapshot eliminates the need to re-calculate these numbers on a weekly basis. Navision is doing it constantly Microsoft Dynamics NAV's flow technology gives you up to the second information on the status of your business.

All the classic business management ratios are built right into the system: Quick Ratio, ROE, ROI, Debt to Equity, Days to Collect, and many more. Use the information to make strategic buying and selling decisions.

Features:

- . Cash Availability Forecasts
- . Quick Aged Receivables
- . Perpetual Inventory Value
- . Monthly Sales Projections
- . Profitability Analysis
- . Mini-Balance Sheet & Mini-Income Statement
- . Reports on each section for Instant hard copy

Benefits:

- . You know all the time where the cash is
- . Make decision with timely information
- . Keep your banker better informed
- . No re-entry into spreadsheet to get this information
